

# Document Output Control

O’Neil’s ONEdoc solution allows our clients to virtually eliminate their composition and desk top publishing departments by providing a cloud-based composition tool for managing, editing and even creating new document templates.

With ONEdoc, you can edit your documents, make global changes, proof documents instantly after making changes, and send documents to other stakeholders for review, via our approval workflow system.

ONEdoc also will manage all images, logos, and other content via image libraries. Document templates can also be managed by document types, by clients, by department, or customized to allow you quick access to all templates.

If you currently build and manage your own document templates, converting to ONEdoc will save you the costly expense of software licenses, annual maintenance fees, finding composition programmers. If you are currently outsourcing to a composition company, ONEdoc will save you costly editing and template management costs. You can make your edits and output updated documents instantly, using our ONEdoc system.
